

Asbestos Management Plan

(Supporting the Asbestos Management Policy)

If you have difficulty with reading this management plan, including any difficulties with sight or hearing, or if you require this document translated into another language, please contact us and we will be happy to provide this information in a format that suits your needs.

Our Vision, Our Values, Our Strategic Objectives

Our Vision

A vibrant neighbourhood where everyone can prosper.

Our Values

Caring, Reliable, Fair, Open and Adaptable

Our Strategic Objectives

Equality and Diversity Statement

Elderpark Housing are committed to ensuring people or communities do not face discrimination or social exclusion due to any of the following protected characteristics: age; disability; gender reassignment; marriage and civil partnership; pregnancy and maternity; race; religion and belief; sex or sexual orientation.

This document complies with our Equality and Diversity Policy.

We will regularly review this Management Plan and consider any equalities implications taking the necessary action to address any inequalities (either directly or indirectly) that result from the implementation of this Management Plan.

1. Introduction and Link to Asbestos management Policy

- 1.1 Elderpark Housing has a statutory duty as an employer, a landlord and registered provider of social housing to ensure the health, safety and wellbeing of its employees, customers and “other” stakeholders in respect of managing “Asbestos Containing Materials” (ACMs) in the Association’s non-domestic properties and communal areas. This includes all non-domestic properties which were constructed prior to 2000 and these will be subject to this Asbestos Management Plan (AMP).
- 1.2 This AMP is a legal requirement to have in place and should be read in conjunction with the Asbestos Management Policy which defines our overall approach to minimising the risk of disturbing ACM’s and human exposure to Asbestos fibres. The Policy defines the scope in terms of relevant properties, work streams and people to whom it applies.
- 1.3 This AMP underpins the Asbestos management Policy and contains additional detail of the management arrangements we have in place, to enable Elderpark Housing to comply with all Legislation and standards relating to Asbestos management and the policy. The Health and Safety Executive (HSE) states the AMP should be reviewed annually or sooner if necessary.
- 1.4 All Elderpark Housing staff who have any responsibility for the management of Asbestos across the organisation, will be required to have read and understood both this Asbestos Management Plan and the Asbestos management Policy. They will need to ensure that all relevant staff within their team have read both documents.

Duty to Manage and the Appointed Duty Holder

- 1.5 The duty to manage asbestos is contained in regulation 4 of the Control of Asbestos Regulations (CAR) 2012. It requires the person who has the duty (i.e. the 'duty holder') to:
 - take reasonable steps to find out if there are materials containing asbestos in non-domestic premises, and if so, its amount, where it is and what condition it is in
 - presume materials contain asbestos unless there is strong evidence that they do not
 - make, and keep up-to-date, a record of the location and condition of the asbestos-containing materials - or materials which are presumed to contain asbestos
 - assess the risk of anyone being exposed to fibres from the materials identified
 - prepare a plan that sets out in detail how the risks from these materials will be managed
 - take the necessary steps to put the plan into action
 - periodically review and monitor the plan and the arrangements to act on it so that the plan remains relevant and up-to-date
 - provide information on the location and condition of the materials to anyone who is liable to work on or disturb them

- 1.6 There is also a requirement on others to co-operate as far as is necessary to allow the duty holder to comply with the above requirements.

2. Legal and Regulatory Framework

- 2.1 The Asbestos management Policy sets out the Scottish Housing Regulators framework, including the 7 Regulatory standards and how they apply to Asbestos management within Elderpark Housing.

- 2.2 The Asbestos management Policy explains the key legislation in place which Elderpark must comply with as an employer and registered landlord of social housing, which is listed below:

- Health and Safety at Work etc. Act 1974
- Management of Health and Safety at Work Regulations 1999
- Control of Asbestos Regulations (CAR) 2012.
- L143 Approved Code of Practice and guidance - Managing and working with asbestos
- Construction (Design and Management) Regulations 2015 (CDM)
- Reporting of Injuries, Diseases or Dangerous Occurrences Regulations (RIDDOR) 2013

- 2.3 In addition to these key pieces of legislation there are other associated regulations, standards and guidance which are applicable to Asbestos management, these are:

- HSG210: Asbestos Essentials
- HSG247: Asbestos: The licensed contractors' guide
- HSG248: Asbestos: The analysts guide
- INDG 223 A Short Guide to Managing Asbestos in Premises
- HSG264 Asbestos: The survey guide
- The Housing Scotland Act 2006
- The Reporting of Injuries, Diseases and Dangerous Occurrences Regulations (RIDDOR 2013)
- The Workplace (Health, Safety and Welfare) Regulations 1992
- Personal Protective Equipment at Work Regulations 1992
- Environmental Protection Act 1990 Amendment (Scotland) Regulations 2019
- The Waste (Scotland) Regulations 2012

3. Roles and Responsibilities

- 3.1 The Asbestos management Policy contains details of key roles and responsibilities associated with managing risks associated with Asbestos bacteria for Elderpark Housing.

In addition to the main management responsibilities set out in the Policy, some further detailed responsibilities are set out below.

Duty Holder

- 3.2 The Chief Executive is the Duty Holder and has overall responsibility for ensuring the health and safety of employees and others using or working within the Association's properties including the protection of those persons from asbestos.

Responsible Persons

- 3.3 The Duty Holders tasks (not the responsibility) are delegated to **the Asbestos Co-ordinator** who should be given appropriate training, authority and resources to enable them to fulfil this role and report to the Management Committee and Chief Executive. The Asbestos Co-ordinator will be responsible for the development and implementation of the following:

- The Asbestos Policy Statement
- Organisation and arrangements to put the Asbestos Management Plan into effect
- Maintenance and amendment of the Asbestos Register
- Annual and periodic review of the operation of the Asbestos Management Plan
- Vetting or appointment of licensed and non-licensed asbestos contractors to undertake work on asbestos containing materials
- Ensuring supervision of asbestos removal works
- Maintenance of records associated with work on asbestos
- Training and staff liaison regarding asbestos containing materials

- 3.4 **The Deputy Asbestos Co-ordinator** reports to the Asbestos Co-ordinator and adopts the role of the Asbestos Co-ordinator in his absence.

- 3.5 **Independent Asbestos Consultants** (Bradley Environmental Ltd) are available to provide technical and legal advice to the Asbestos Co-ordinator and his Deputy as and when required.

- 3.6 **The independent Consultant** also supervises/monitors asbestos works as and when required to do so, including completing surveys, sampling, analysis and the issue of relevant certificates/documentation. They shall also when instructed by Elderpark carry out re-visit surveys to determine if the ACM has not deteriorated and is not easily accessible by the general public.

- 3.7 **The independent Consultant** also advises upon the competence of licensed and non-licensed Contractors during the selection of Contractors.

- 3.8 Please refer to Organisational Hierarchy chart in Appendix 1 and contact details in Appendix 2.

4. Aims and Objectives of this Asbestos Management Plan (AMP)

4.1 The aim of this asbestos management plan (AMP) is to support the Asbestos Management Policy in giving more detailed arrangements that Elderpark Housing will have in place to enable us to meet all legal and regulatory obligations and ensure best practice is followed in relation to Asbestos management. We aim to:

- Keep the general public, tenants, and employees aware of the risks associated the disturbance of ACM's and the risk of exposure to Asbestos, and as far as reasonably practicable, ensure their health, safety and wellbeing in relation to Asbestos management.
- Set out a clear approach to assessing, controlling, and monitoring the risks associated with ACM's within Elderpark's properties and office premises if built before year 2000.
- Communicate with tenants and staff the importance of Asbestos management including providing guidance, training and emergency procedures.
- Ensure that all procedures relating to the Asbestos management Policy support the fair treatment of all tenants with respect to their different needs, circumstances, and lifestyle.

4.2 To meet our aims, we have set the following objectives to be achieved:

- We will comply fully with all relevant legislation, regulations, ACOP's, Standards and Guidance related to asbestos applicable to the properties we own and manage.
- We will ensure that we identify all properties owned or managed by Elderpark which are classed as non-domestic in line with the Control of Asbestos Regulations. This will form the overarching database of all properties which require a management survey in line with regulation 4 of CAR 2012. This will enable us as a duty holder for these properties to identify the location and condition of ACM's and prevent the risk of harm to anyone working, living in or visiting the properties.
- We will ensure all work relating to asbestos is carried out by competent contractors for example all asbestos surveys will be completed by a UKAS accredited contractor. There are different types of work associated with asbestos (licensed, non-licensed and notifiable non licensed) we will ensure these types of work are only completed by appropriately qualified and competent contractors.
- We will ensure, prior to any works commencing in either domestic or non-domestic settings, that we have suitable and sufficient asbestos information in place to inform that work activity to enable it to proceed safely, including management surveys and R&D surveys where required. All survey data will be recorded within our overarching asbestos database which we will continually update and manage with live information.

This will enable us as a duty holder to comply with regulation 5 of CAR to not proceed with any work until we identify if asbestos is present.

- We will robustly maintain an up-to-date asbestos register of all asbestos data, recording the location, condition, exposure risk, maintenance activity and remedial / removal works.
- We will ensure that there are clearly appointed accountabilities, roles, and responsibilities to manage asbestos safely across the business, including a duty holder and responsible person. We will also ensure we have in place an Asbestos Management Plan (AMP) which is required by law.
- We will ensure there are suitable levels of governance, oversight, and supervision to implement this policy and the associated Asbestos Management Plan which should be read in conjunction with this policy.
- We will ensure that all relevant staff receive appropriate training, including specialist roles and general awareness for Asbestos safety management.
- We will ensure suitable and sufficient resources are in place to effectively manage customer relationships and tenancy agreements to gain timely access to customers' homes for any work associated with asbestos surveys or remedial works.
- We will ensure there are sufficient levels of assurance in place to evidence we are complying with all relevant legislation, standards, our policies, Management Plan and associated procedures in relation to managing asbestos safely.
- We will identify and record ACMs found on the premises we own and manage and evaluating the risk on the basis of the best competent advice available.
- We will Periodically inspect and assess the condition of ACMs within its premises, updating the register and reassessing the risk accordingly.
- We will repair, encapsulate or remove ACMs where the condition creates an unacceptable risk.
- We will Implement effective emergency procedures for the management of uncontrolled, unexpected or unplanned release of asbestos fibres.
- We will Provide effective response to incidents of suspected, previously unidentified or damaged asbestos.
- We will ensure that we manage data robustly and respond promptly to failures in systems and data management, to assure ourselves that we are accurately and robustly fulfilling our statutory responsibilities as an employer and a landlord relating to

managing asbestos safely across the business and sharing information as appropriately with anyone who could disturb asbestos.

- We will Monitor and review the effectiveness of the policy and the asbestos management plan
- We will ensure we work with all regulatory, statutory and enforcing authorities, including the Scottish Housing Regulator (SHR), the Health and Safety Executive (HSE) and local authorities.

5. Identification of Asbestos

5.1 The Association will increase the intelligence of our stock with regards to asbestos by carrying out surveys and re-visit surveys to establish and monitor the presence, location and type of asbestos contained within a property owned by the Association.

5.2 Surveys will be carried out as follows:

- Management surveys on all non-domestic properties and communal areas (built before 2000)
- Where major works are being carried out and ACMs are suspected
- Management or Refurb/Demo survey* on properties due for works
- We shall strive to limit the use of cloned data based on non-domestic properties and communal areas.
- Refurbishment works carried out and previous survey information.
- Re-visit surveys and re-evaluate the condition of ACM's where they have been identified

5.3 The survey type is determined by the scale and scope of the work.

Management surveys

5.4 An asbestos management survey is a non-intrusive survey, which should be completed by a competent person and meet the criteria specified in Asbestos: The Survey Guide (HSG264). The surveyor completing this work is expected to be capable of determining the number of samples necessary in any given room based on the material, location and their experience.

5.4 Management Surveys sample all readily accessible suspect materials and are generally commissioned in order to develop general information on the incidence of ACM's across housing stock and office/commercial premises.

Refurbishment and demolition survey (R&D)

5.5 If down-taking or intrusive maintenance work is planned, then a Refurbishment and Demolition Survey should be completed in-lieu of a Management Survey.

Refurbishment and demolition surveys are undertaken where significant disruptive works will be carried out in properties.

- 5.6 While this typically relates to demolition and major refurbishment works the HSE have issued guidance stating that this type of survey should be undertaken in advance of planned improvement project e.g. kitchen and bathroom replacement projects. (Refurbishment & Demolition surveys sample all suspect materials, and are intrusive leading to damage to wall panels, floors, service risers etc.).
- 5.7 Where improvement programmes are to be undertaken in the housing stock for example: kitchen and/or bathroom replacement programmes, a representative sample number of Refurbishment & Demolition surveys will be carried out on each Property type included in the project.
- 5.8 Surveys will be undertaken by a UKAS Accredited surveyor/organisation. Surveys will identify and record the location, extent, condition and type of any known or presumed ACM. Surveys can be instructed by any member of the Maintenance Services team but all completed surveys must be copied to the Asbestos Co-ordinator and Deputy Asbestos Co-ordinator.

6. Management Strategy

- 6.1 Surveys of premises for the purposes of identification and assessment of ACM will be carried out in full accordance with the guidance set out in the HSE publication, HSG264 -Surveying, Sampling and Assessment of Asbestos-Containing Materials.
- 6.2 Elderpark HA will ensure that appropriate sample Refurbishment / Demolition Surveys will be carried out prior to any demolition work or major refurbishment within properties with ACM.
- 6.3 Elderpark HA will ensure that all external consultants and contractors working on such surveys utilise laboratory testing using appropriate experience and accreditation to either ISO 17025 or EN 45013. All Management asbestos surveyors used by Elderpark HA will be trained to BOHS P402 standard.
- 6.4 Elderpark HA will carry out sample surveys of all materials non- domestic buildings. These surveys enable Elderpark HA to be aware of the exact location, extent and condition of all ACM in the properties that they have surveyed.
- 6.5 These sample surveys will be Management, and where appropriate, Refurbishment/Demolition in line with all current regulations.
- 6.6 The findings of all surveys will be used for management purposes, to be defined in subsequent sections of this document.

- 6.7 Existing survey reports include photographic evidence, laboratory analysis certificates and marked-up building plans (where available). These can be viewed on Elderpark HA's asbestos management system.
- 6.8 Regulation 4(6) of the CAR requires review of the assessments resulting from such surveys if there is any reason to suspect that assessment is no longer valid or if there have been significant changes to the property.
- 6.9 To comply Elderpark HA will undertake periodic re-inspections in accordance with the Risk Assessment Scores (RAS), with any changes recorded in the records. Additionally, there will be annual reviews by the Assurance and Governance Team for the purposes of ensuring the management plan and survey records remain up to date and valid. The duty holder will ensure the conclusions of any reviews are recorded as described previously.

7. Assessment of Risk

- 7.1 Regulation 4(8), part (a) carries the requirement to undertake an assessment of the risk of exposure of persons to asbestos fibres. The assessment of risk will utilise the results of the Material Assessment Score (MAS) for the identified ACM. This will be provided by the surveyor.
- 7.2 Elderpark HA will determine the priority for management of ACMs by assessing the likelihood of those materials being disturbed. This priority assessment will take into account such factors as;
- The location of the material
 - Its extent
 - The use to which the location is put
 - The occupancy of the area
 - The activities carried out in the area; and
 - The likelihood/frequency with which maintenance activities are likely to take place

This will enable the production of a Priority Assessment Score (PAS) for management.

- 7.3 The full assessment of risk of exposure, will include both the MAS and PAS for each ACM identified. This is known as the Risk Assessment Score (RAS), and is the score from the addition of the MAS and the PAS.

RAS = MAS + PAS

- 7.4 Surveys and assessments on any subsequent acquisitions, Elderpark HA will undertake to have completed both the PAS and the full risk assessment on each ACM on receipt of the sampling survey results.
- 7.5 Both the PAS and the results of the risk assessment will be recorded and made fully available as necessary in Elderpark HA's Asbestos Management database.

- 7.6 The Asbestos Co-ordinator (and in their absence Deputy Asbestos Co-ordinator) will ensure that the risk assessment process is undertaken within 10 working days of receipt of the survey report. This will also include the updating of Elderpark HA's asbestos Management database.
- 7.7 The Association will appoint a suitably qualified contractor to carry out asbestos surveys and assess the risk in relation to ACMs by carrying out a material risk assessment and detailing:
- Property code
 - Property address
 - Material type
 - Location
 - Damage
 - Surface treatment
 - Asbestos type
 - Recommendations to remove/monitor/label/manage
- 7.8 It is not the policy of the Association to remove ACMs that are in good condition and present insignificant risk to the health of the building occupants, however we recognise the need for flexibility where there is a case made for specific removal.
- 7.9 If the Association decides to leave the asbestos in situ then it will:
- Log the details on the register and refer user to survey which will include a floorplan of the property with ACM areas highlighted.
 - Ensure that all tenders for planned and cyclical works include reference to the Control of Asbestos Regulations 2012 and the Associations asbestos register.
- 7.10 Work orders for reactive repairs will highlight areas of ACM. Damaged ACMs will be made safe either by encapsulating or by removing the ACM entirely. The Asbestos Management Database will be updated to reflect the action taken.

Communicating with our Contractors

- 7.11 Prior to any work being instructed and carried out in properties owned or managed by The Association, the Asbestos register must be consulted and information in relation to ACMs communicated to contractors.

Contractors Responsibilities

- 7.12 Contractors (including sub-contractors) working for the Association are responsible for ensuring that all employees under their control reference the Asbestos Register and understand its content and actions required. They are also responsible for ensuring all employees under their control work in line with the Associations Asbestos policy and

management plan and have received Asbestos Awareness training. The Association has the same responsibility for its staff.

7.13 Prior to starting a job if a contractor suspects the presence of asbestos, they must not start it and contact the Association for advice. If the property has not been previously surveyed and was constructed prior to 2000 the job must be postponed until a survey is carried out.

7.14 When, during the course of any work, asbestos or material suspected of being asbestos, not identified by the asbestos register is discovered, the contractor will ensure that:

- All work is stopped in the area;
- All persons are removed and kept out of the immediate vicinity without causing undue concern
- The area is closed, sealed or locked off (where practicable).
- Any equipment or materials are left in place. These will require to be disposed of as special waste depending on the result of sampling.
- A warning sign(s) with the following, or similar, wording: 'POTENTIAL ASBESTOS HAZARD - KEEP OUT' is prepared and prominently displayed. Where this is not deemed appropriate to use this type of wording alternative strict entry prohibition notices will be used.
- The Maintenance Officer/Director of Maintenance is immediately notified.
- Arrangements are made for the suspected ACM to be sampled by a competent Asbestos Surveyor and analysed by a UKAS Accredited Laboratory.
- The above may vary depending on the particular circumstances involved.

7.15 **Contractors should refer any queries to The Association at the earliest opportunity.**

8. Communicating with Our Tenants

8.1 Where asbestos materials are identified, are in good condition and remain in-situ, tenants will be provided with an information leaflet (Appendix 1 Asbestos Information and Advice for tenants)

8.2 The information leaflet will be included in sign up packs for new tenants or sent to existing tenants where asbestos has been found. The information leaflet will include the following:

- What is Asbestos?
- The different types of asbestos
- Where asbestos was used
- What tenants should do if they suspect asbestos
- What are Elderpark doing in terms of managing asbestos?

9. On-Going Monitoring

9.1 All asbestos records and procedures must be regularly monitored and reviewed. It is imperative that all asbestos documents are kept up to date and are accessible to staff and contractors. Bradley Environmental have provided a portal for the identification of asbestos the asbestos register and full asbestos surveys. Our contractors have been provided with access to this portal to view the content prior to carrying out works or if an operative suspects an ACM not recorded in the report.

9.2 Any changes to the condition and location of any known or suspected ACM's must be recorded on the asbestos register and associated files.

Similarly, any removal work or encapsulations must be recorded with encapsulations noted subject to annual inspections.

9.3 Amendments to the Asbestos Register, Asbestos Management Plan and Asbestos Management database

9.4 It is vital that the Asbestos Register, Asbestos Management Plan and Asbestos Management database are amended to reflect the existing situation and conditions. It is the responsibility of the Asbestos Coordinator to ensure that such amendments are completed and accurate.

9.5 The Asbestos Register and Asbestos Management Plan are only to be amended by or with the authority of the Asbestos Co-ordinator.

9.6 A review of the Management Plan is to be undertaken by the Asbestos Co-ordinator and external Asbestos Consultant every 12 months unless:

- There are changes in site conditions (e.g. changes in personnel or use of building)
- There are changes in the condition of asbestos containing materials
- In such cases, the Plan will be amended and re-issued immediately
- Important areas for assessment review are:
 - Confirmation that removal, repair and encapsulation works have been completed satisfactorily
 - Checking that periodic monitoring of the condition of remaining asbestos containing materials is effective
 - Confirmation that records are being maintained and kept up to date
 - Investigation of incidents/accidents, development of future preventative measures
 - Checking that the plan is communicated to all concerned and included in tenders and contracts from external companies
 - Confirmation that emergency procedures are in place and that the emergency services are aware of the presence of asbestos on the premises

10. Identification of Damaged or Disturbed Suspect Material

10.1 The various processes for identifying asbestos via management and refurbishment asbestos surveys and what to do in the event that asbestos or suspected asbestos has been disturbed can be found in Appendices 2 - 7 of this AMP.

10.2 It is the responsibility of staff and contractors to report to the Association if they suspect that disturbed or damaged ACM's may be present in a building owned or partly owned by the Association. Where this is suspected the following applies:

- Immediate contact with a licensed asbestos survey contractor to identify if the material contains ACM's
- Where damage to any material known to contain asbestos has taken place and is likely to give rise to airborne fibre release, the area must be isolated pending air monitoring tests being carried out.
- Air monitoring tests will determine the level of any potential
- Contamination, or provide reassurance that unacceptable contamination has not occurred.
- Details of air test results will be made available for recording purposes
- Remedial action will only be required when airborne fibre levels exceed levels as stated in the 2010 Health & Safety Guidance (HSG) 264 guidance
- When remedial action becomes necessary after exposure, the relevant facts may have to be reported to the HSE in accordance with RIDDOR. Advice may be sought from a licensed asbestos survey contractor to determine whether the incident is in fact RIDDOR reportable.

11. Performance and Assurance

11.1 Section 9 of the Asbestos management Policy contains details relating to the implementation of the policy and what levels of Governance and oversight we have in place. Section 10 of the Asbestos management Policy contains information of who is responsible for providing operational assurance information and how this will be reported.

11.2 In addition to those two sections of the policy we will ensure that the Management Committee will receive regular updates on the implementation of the Asbestos management Policy and any Asbestos management Reviews so that they can have assurance that it is operating effectively.

11.3 Performance and compliance shall be reported by the Governance and Compliance Manager at quarterly Management Committee meetings and shall include the following:

- Performance relating to ensuring that all non-domestic properties and communal areas have been identified and receive an asbestos survey.

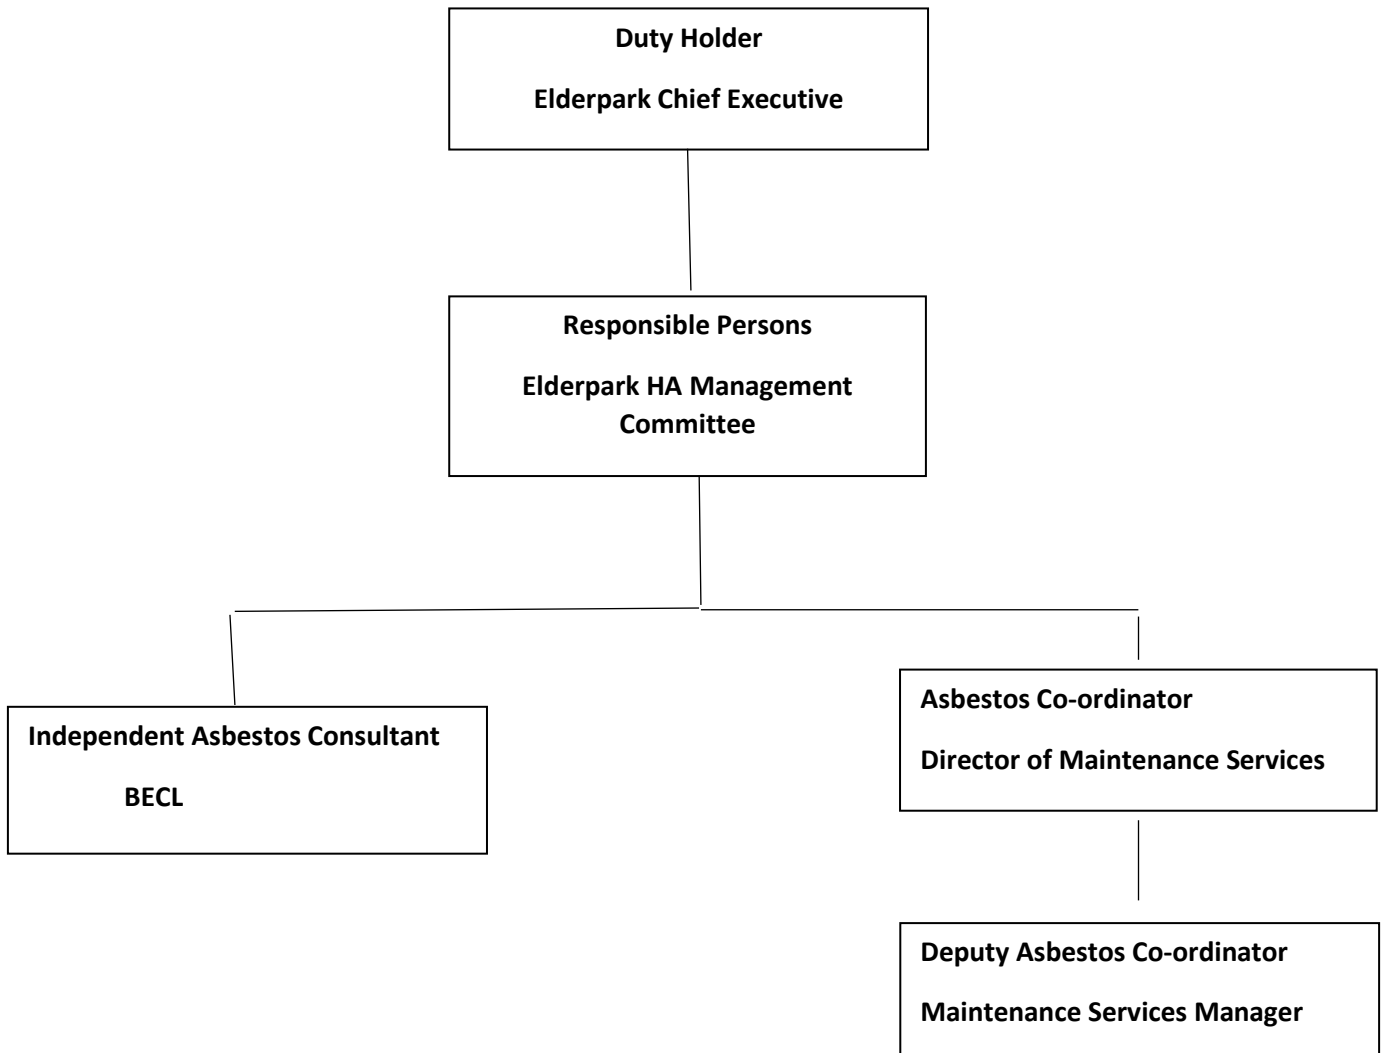

- Performance relating to carrying out re-inspections to record the condition of the ACM's or where any encapsulation has been completed that it's still intact
- Reports of any Asbestos related incidents that has occurred.

12. Review

12.1 The Management Plan will be reviewed annually or earlier to take into account:

- Legislative, regulatory and good practice requirements
- Association performance
- The views of the Board, tenants, other customers, contractors and staff.
- The corporate Risk Register
- Association Aims and Objectives.

ELDERPARK
HOUSING

ASBESTOS

**INFORMATION
AND ADVICE
FOR TENANTS**

WHAT IS ASBESTOS?

Asbestos is a natural mineral that was used extensively for fireproofing and insulation, and for reinforcing a wide range of building products.

In the 1930's, it was realised that breathing in asbestos fibres could lead to damage to the lungs and other organs. In many cases, this could lead to fatal illnesses.

A series of Government regulations over the years has resulted in a complete ban on the use of asbestos in buildings, and new buildings are completely asbestos-free.

IS ALL ASBESTOS THE SAME?

There are three common types of asbestos: blue, brown and white.

While all asbestos is potentially dangerous, blue and brown asbestos are known to carry a much higher risk than white asbestos.

For this reason, the blue and brown types were banned many years ago, followed by a complete ban by 1999.

However, asbestos is only dangerous if fibres are released into the air and are breathed in.

ASBESTOS WHICH IS SEALED AND NOT DISTURBED IS NOT A HEALTH RISK

WHERE WAS ASBESTOS USED?

Asbestos has been used in a variety of ways in houses and flats, although the use of blue and brown asbestos was generally more common in factories, warehouses and public buildings.

The following examples give some idea of the extent to which asbestos was added to building materials:

- Linings inside airing cupboards;
- Vinyl floor tiles;
- Roofing felt;
- Inside central heating boilers;
- Inside electric storage radiators;
- Artex ceilings and wall treatments;
- Asbestos-cement roof sheets;
- Asbestos-cement gutters & pipes.

Where asbestos is present, it is most likely to be bound into the material, meaning that the release of fibres is highly unlikely. (Vinyl floor tiles are an example.)

Remember, there is no health risk provided asbestos is not disturbed in such a way that fibres are released into the air.

WHAT SHOULD I DO?

If you live in an older property (built before 2000), there is a simple rule you can follow: Don't drill, saw, sand, scrape or disturb any material, which could possibly contain asbestos. Check the list above.

If you suspect that there may be asbestos in or around your home, let us know. We can have a sample checked for you and we can advise you what to do next.

WHAT IS ELDERPARK DOING ABOUT ASBESTOS?

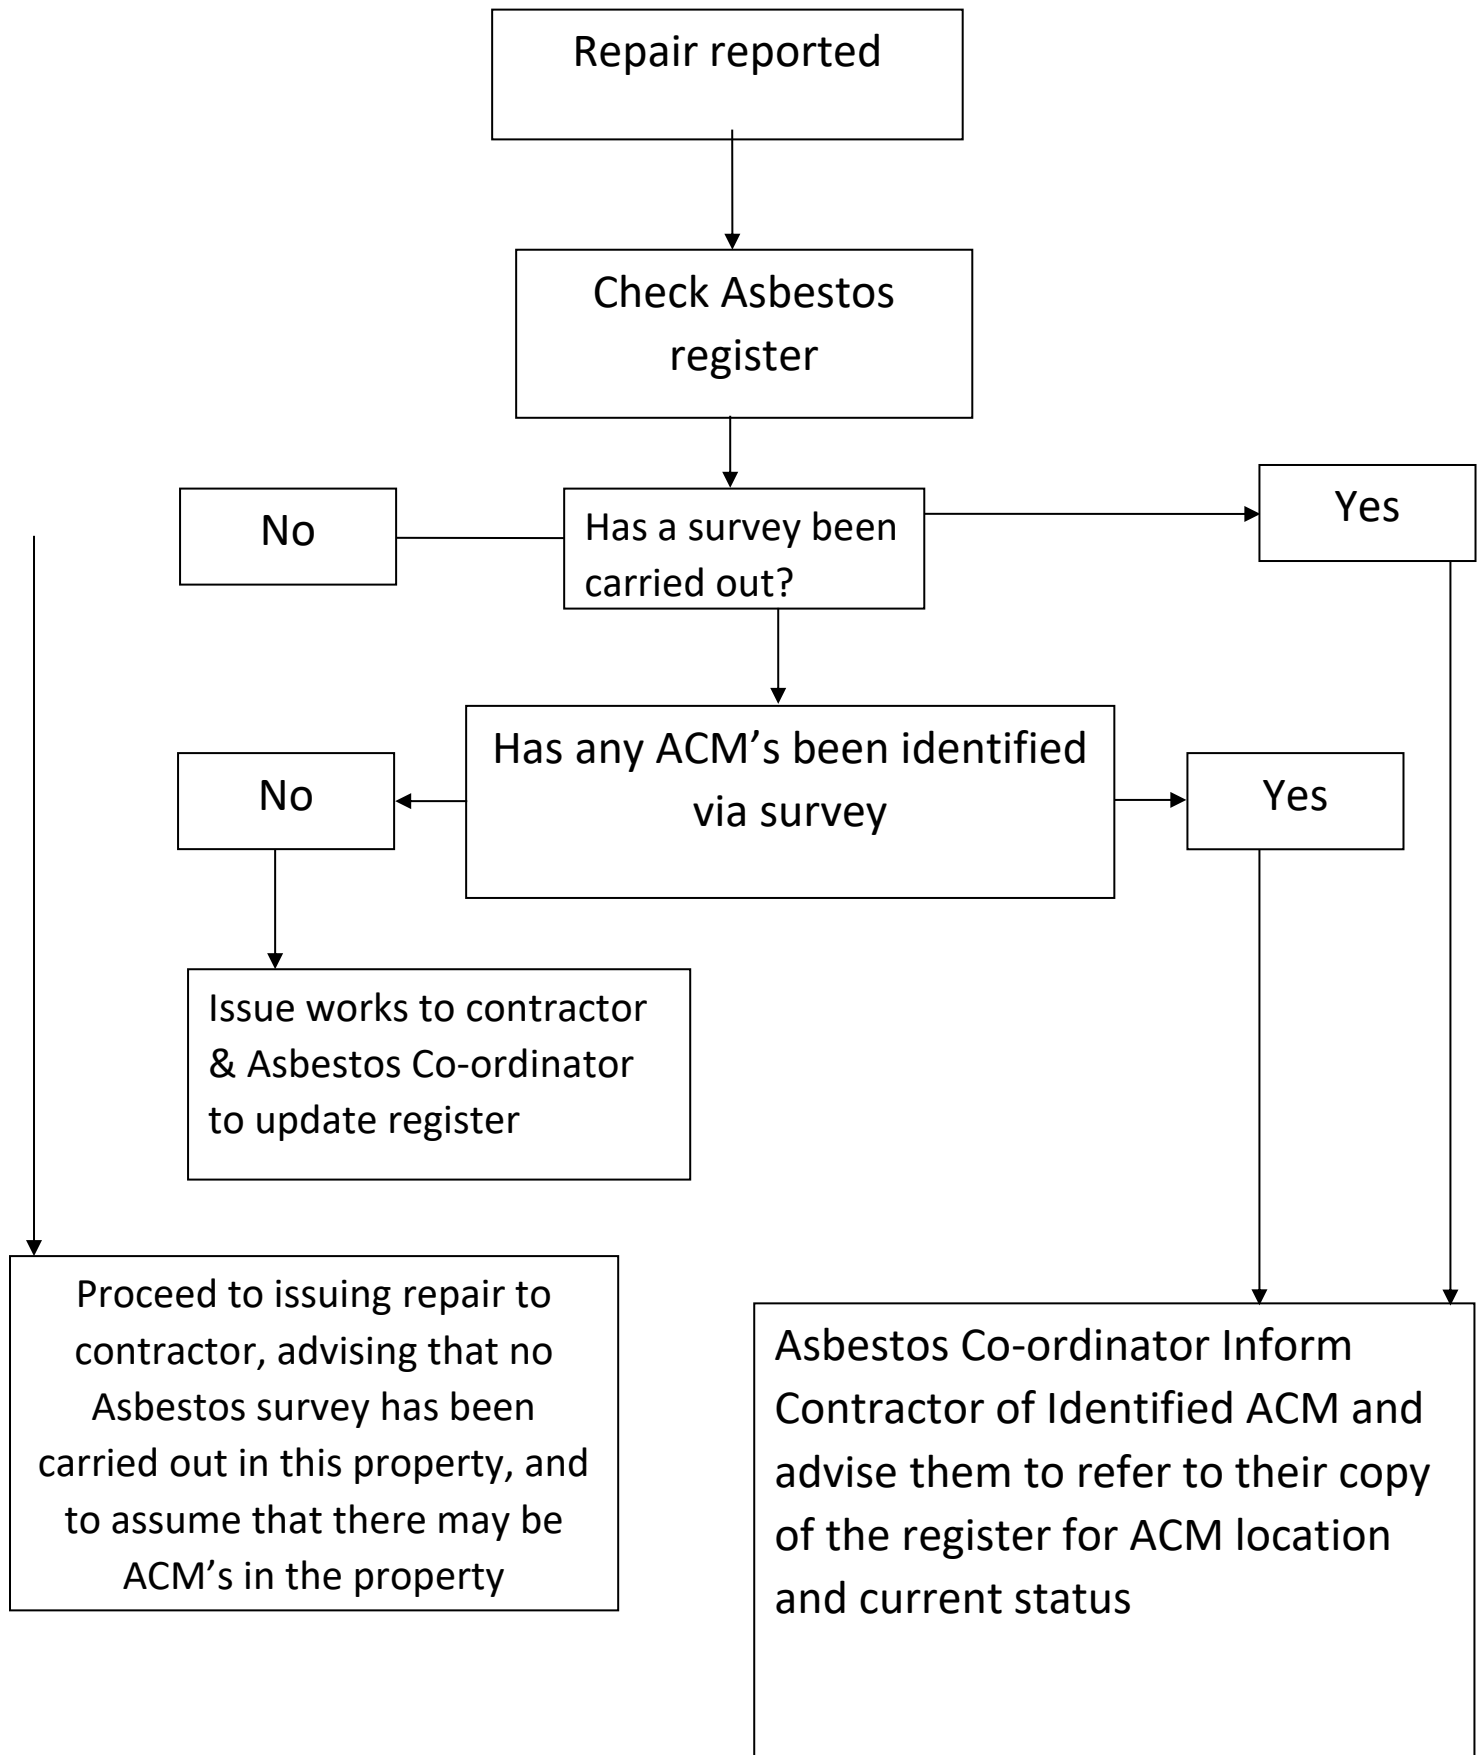

We will soon be carrying out a programme of inspections in communal areas (that is, staircases and hallways in tenements and other common areas, commercial properties, etc.) to find out if there is any asbestos in the fabric of the building. This will be done on a rolling programme over the next few years.

These inspections will be carried out by surveyors who have been trained to recognise asbestos materials. They will take samples for analysis so that the presence, or otherwise, of asbestos can be confirmed.

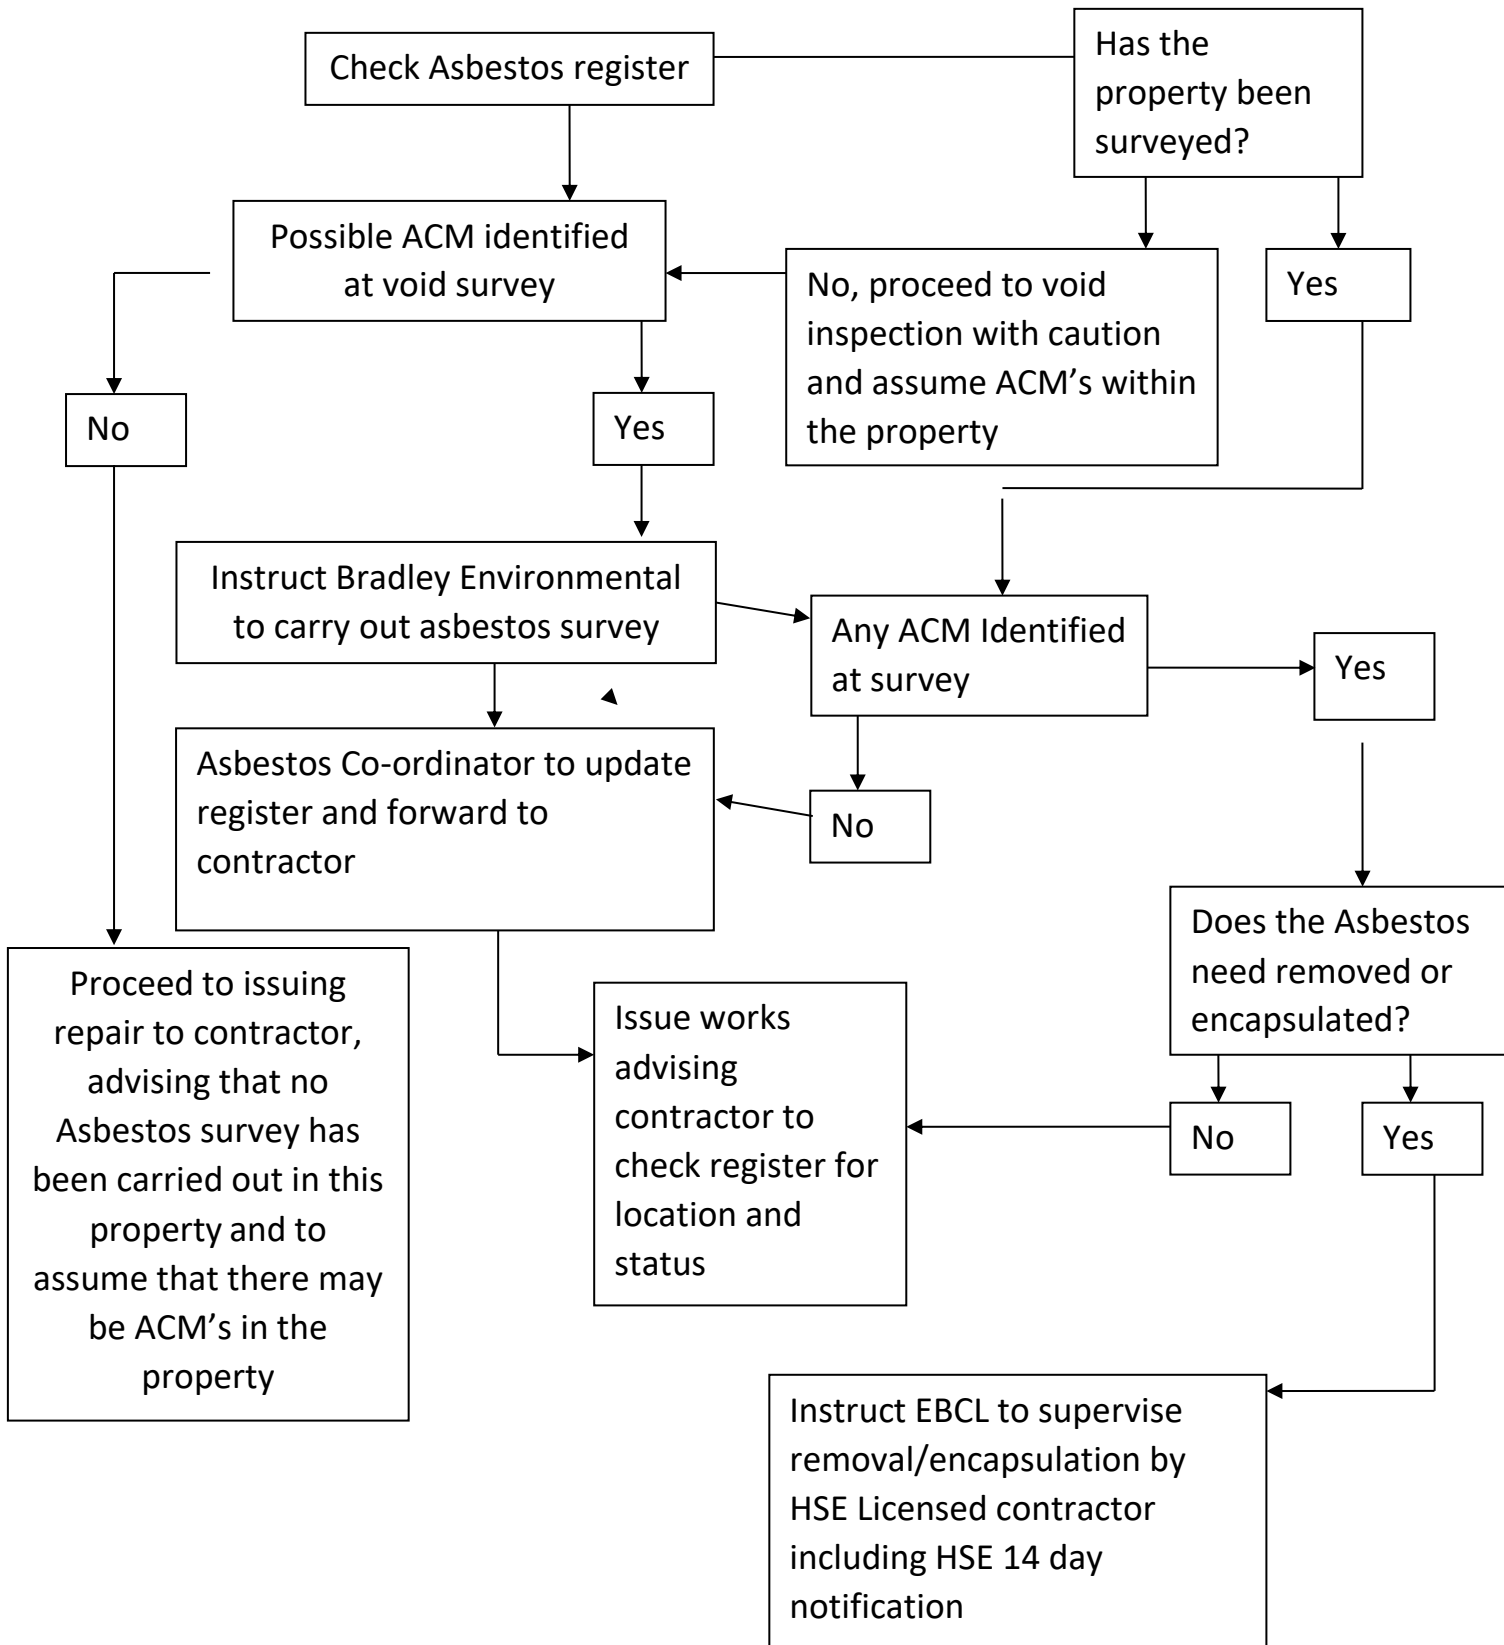

If we do find any asbestos materials, we will make sure they are maintained in a safe condition; contractors will be told not to disturb them unless proper precautions are taken.

When we have completed the inspections of communal areas, we will start a programme of checking our houses and flats.
